Gathering and Analyzing Data: Pocket Project

My Predictions: I think that
the average number
of my sisters' pockets
will be four.

What I Found Out: ~~if~~ I figured out
the pockets like I
counted everybody's pockets
and then we added
it and counted the
total what it was then
what I did was we
took a calculator and
then we divided the
total and then we found
the answer. The answer was 31.

Assessing Predictions: I predicted number
4 but I didn't get it

right it was a good
prediction. I think that I
tried my self and it was a good
prediction and it is good because
I was that close but it
wasn't that answer. The answer
was different and bigger
than the number that I wrote.

We did
it by
13 kids
thoughts
how it
was done
