

## Process Statement: Life Cycle of the Frog

In our class, we have a pet frog named Spongebob. We used to have a tadpole named Froggy, until Spongebob ate him. Before that happened, we saw Froggy change from a baby tadpole into a frog.

We have been studying the life cycle of frogs and tadpoles. Today, we read a book called Fabulous Frogs, and we talked about how frogs move from being a tadpole into a grown up frog.

Next, we took pictures of frogs at all stages of their development, and sequenced them to match the life cycle of our pet frogs.

Soon, we will go to the Museum of American History to see the display of frogs, and see the exhibit that shows their life cycle!
